Introduction

Demo Flutter News Application – Introduction

This demo Flutter news application showcases a sleek, modern user interface (UI) designed to deliver a smooth user experience. Built using the Flutter framework, the app offers a full-featured environment where users can explore news content efficiently.

The application includes a well-structured **dashboard** as the central navigation hub, leading to the following core screens:

- **Dashboard Screen** - Displays the list of mobile application screens.
- **News Home Screen** – Displays the latest news articles in a clean, scrollable feed.
- **News Details Screen** - Displays the details of the user-clicked news article.
- **Search Screen** – Allows users to quickly find articles by keyword or topic.
- **Bookmarks Screen** – Lets users save and revisit their favorite news stories.
- **Settings Screen** – Provides customization options for user preferences.

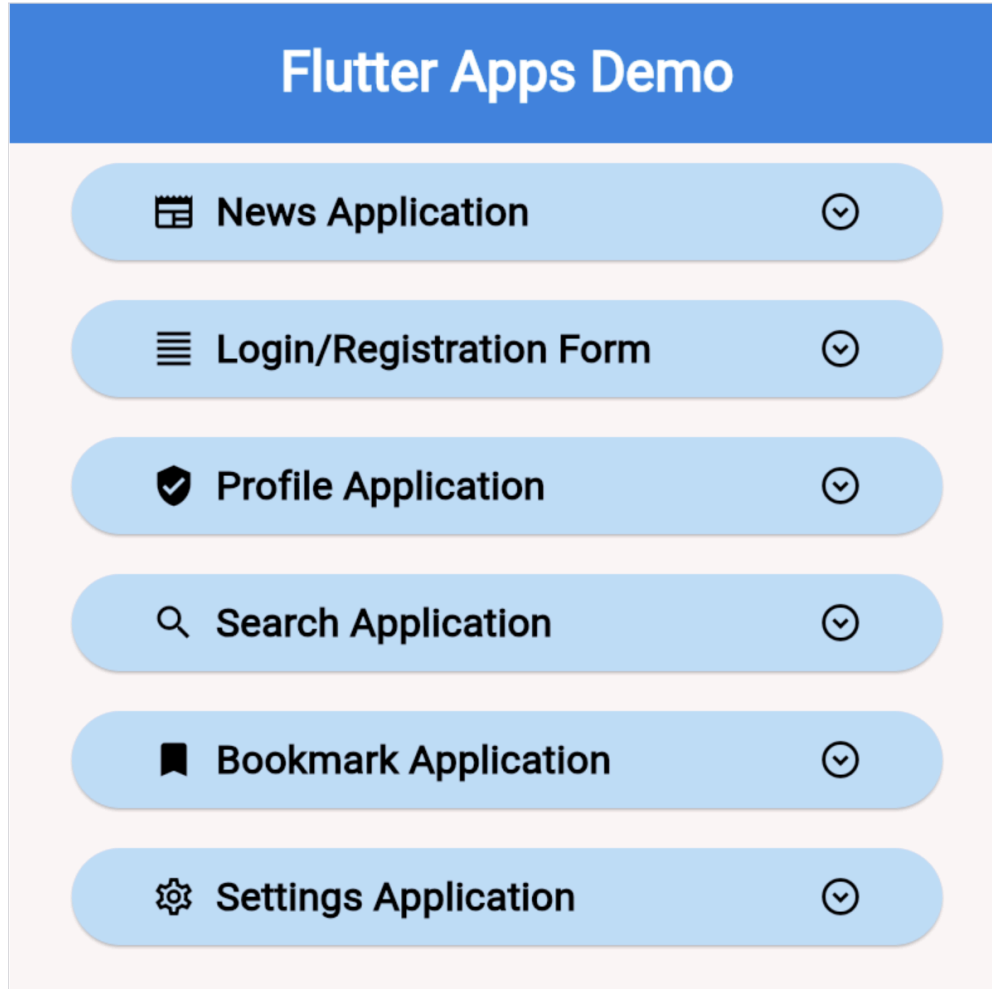

For user authentication and profile management, the app features:

- **Registration Screen**
- **Login Screen**
- **Forgot Password Screen**
- **Edit Profile Screen**

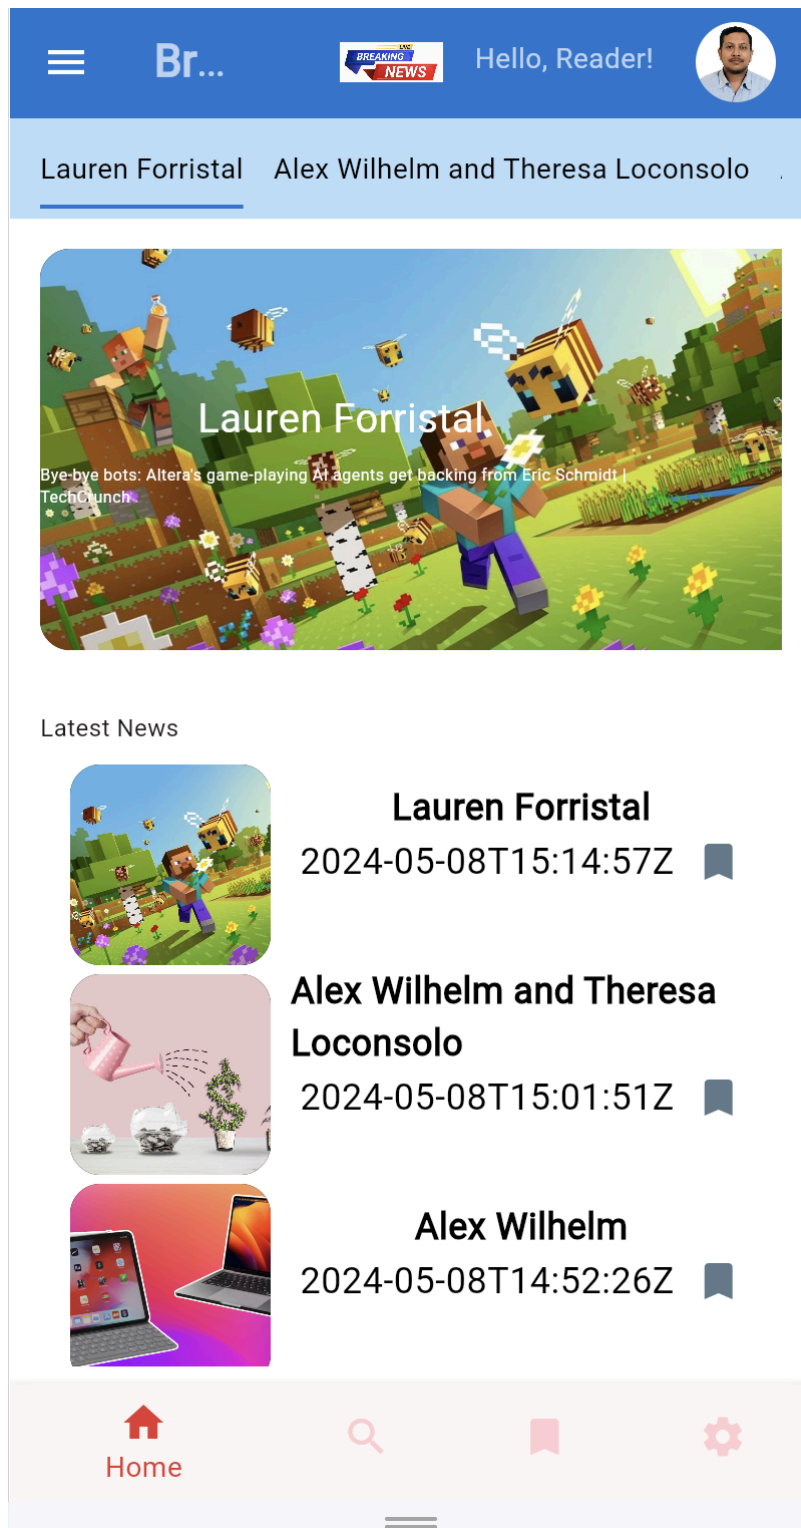

These UI components are designed to offer a smooth and intuitive user journey. Whether a user is browsing headlines or managing their account, the experience remains responsive and engaging across devices. Form validation message in the login/ registration screen.

This project demonstrates the versatility of the Flutter framework in building scalable, user-friendly mobile applications as follows:

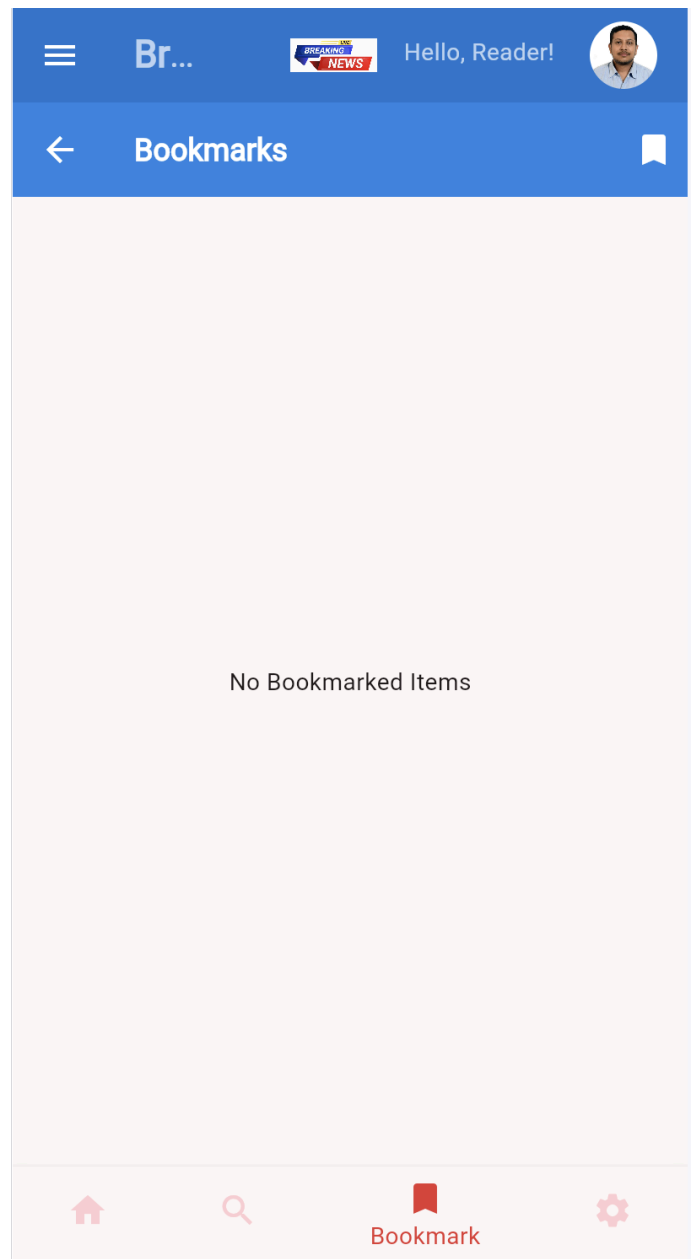

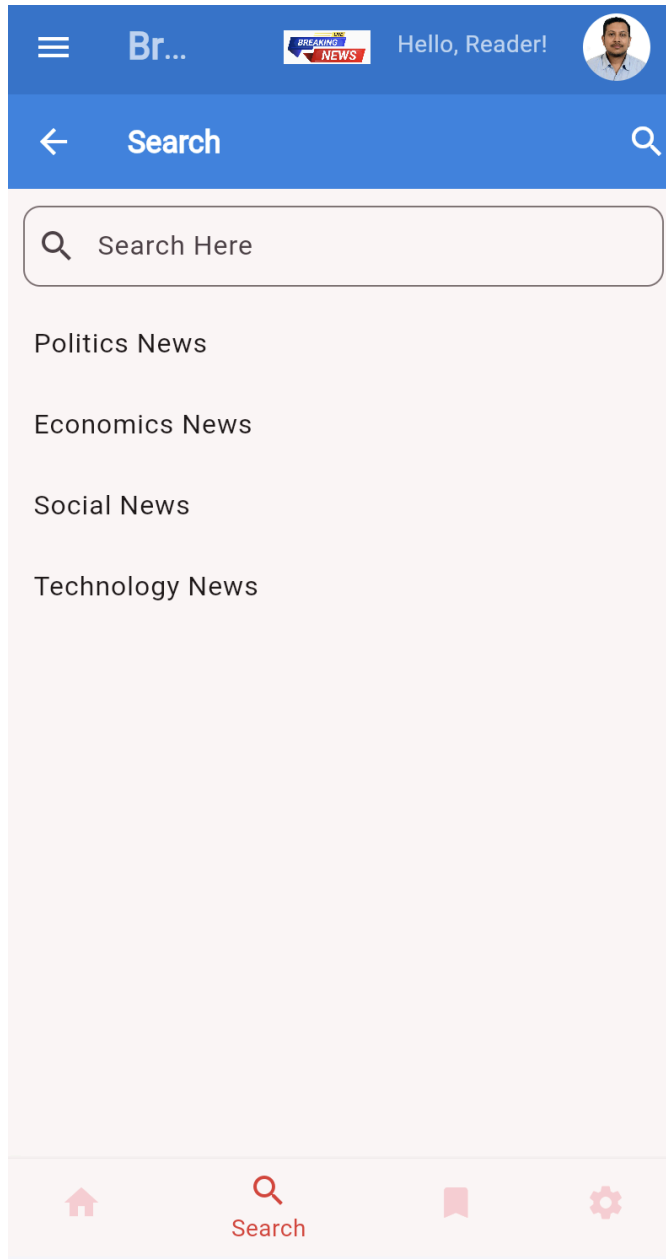

1. Dashboard Screen
